

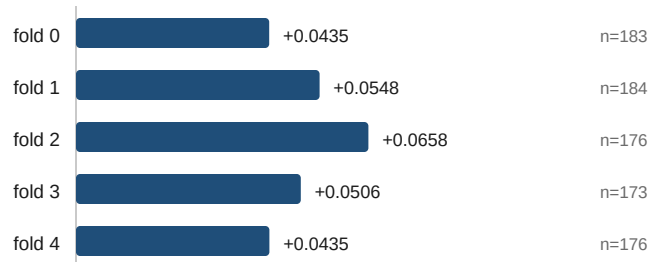

Figure 3 Robustness across strata, and the top-choice diagnostic

Preregistered as descriptive: these could withhold support, never grant it.

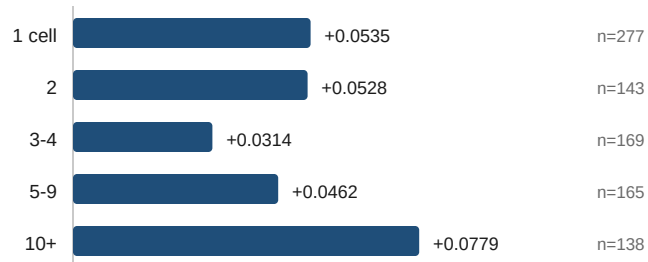

A By held-out fold

Δ RANK, positive in all five

B By pretreatment clone depth

Δ RANK, positive in all five

C Choosing each clone's lowest predicted detection score

How often that condition is a genuine observed zero.

Directional check

Δ TOP1 +0.115471 CI95 [+0.082960, +0.145740]

A consistency check, not a significance test.
